China's Burgeoning Power Industry

China presents the greatest energy market opportunity that has ever existed. As a result of the country's incredible growth over the past ten years, its installed power generation capacity and output are now second only to the US. We have sold millions of dollars worth of equipment in China for US companies. We have given Waukesha Bearings number 1 market share in China, and Pennsylvania Crusher number 2 market share, and we can do the same for you.

Moreover, experts estimate that with average GDP growth of only 6.5%, China will need 48GW of new capacity *each year* through 2020 – that is, each year China will build the equivalent of two thirds of the UK's total installed capacity today (Capgemini, *China Electricity Market 2006*). Yet even with this growth, China's per capita consumption of electricity in 2020 will only reach the level of the US in the 1950s. This means growth is going to continue for a long time.

If you have strong products related to power generation or mining, SCI can help you seize this opportunity before it's too late. We have conducted many proprietary power market analyses for US companies, and in sales we take a *systematic* approach to the market and use only *dedicated sales reps* on your behalf. Take a look at our full approach and advantages on our website at <http://www.s-c-i.com>.

Please call Shiqiang Gu, Vice President and COO, at 610.828.8061, or Timothy Weckesser, president, at 610.828.8060, today if you would like to discuss your company's products and interest in China.
